

Day 1: Introducing RStudio

By Miranda McKibben

A little about me: My education

- I graduated from Olentangy Orange High School and the Delaware Area Career Center Zoo School program in 2018.
- I got a B.S. in Biology, specializing in Ecology and Evolution, from the University of Chicago in 2022.
- I am a third year PhD student at the University of Georgia.

THE UNIVERSITY OF
CHICAGO

Department of Plant Biology
Franklin College of Arts and Sciences
UNIVERSITY OF GEORGIA

I study wild yeast

Follow me on Instagram,
@environmentalyeast

My interests outside academia: Spelunking and cuddling my cat, Toki Roki.

By the end of this course you will:

1. Develop computational thinking skills
2. Create RStudio code to analyze datasets
3. Dissect scientific papers
4. Formulate hypotheses
5. Defend your coding choices

Question

What are some reasons to write code to analyze data?

Possible Answers

1. Forces you to think about how you are analyzing the dataset
 - a. What questions are you trying to answer?
 - b. Are you performing the right tests/creating the right figures, or do the tests and figures you chose produce a biased result?
2. Reproducibility

RStudio

A SYSTEM TO ANALYZE AND
VISUALIZE DATA

FREE, OPENSOURCE SOFTWARE
THAT ALLOWS FOR
REPRODUCIBILITY

A SYSTEM FOR LEARNING HOW TO
CODE

Desktop

- Require download and installation, can be complicated depending on device.
- Does not require internet connection.
- Needs to be installed on any device you use, files need to be downloaded onto computer to save code.
- Fast runtime.
- Every time a new version is released needs to be redownloaded.
- Everything is free
- May be easier to upload and download data.

Browser

- Can be accessed through internet, no installation required.
- Does require internet access.
- Creates a user profile, code is saved on the Cloud in addition to the option of downloading to device.
- May lag depending on internet speed.
- Has every version of RStudio.
- Has a limited free version, more advanced projects and time spent coding costs money.
- Has tutorials for many types of data analysis.

Some tasty R code snippets

R Basics

Do basic tasks with R, like import data and call functions.

- Read a CSV file (.csv)
- Read a character-delimited file (.txt)
- Read an Excel file (.xls, .xlsx)
- Arithmetic with single numbers
- Call a function on a number
- Obey R's naming rules
- Run a function
- Create a table manually

Transform Tables

Do things like filter, sort, and pivot your tables of data.

- Extract columns from a table as a new table
- Rename columns in a table
- Add a column to a table and compute its values
- Compute summary statistics for a table
- Compute summary statistics for groups of rows within a table
- Filter your table to rows with specific values
- Group a continuous variable into categories

Visualize Data

Plot your data in various ways.

- Visualize two vectors using a scatterplot
- Visualize data with a scatterplot
- Visualize counts with a bar chart
- Visualize grouped counts with a stacked bar chart
- Visualize a distribution with a histogram
- Visualize ordered continuous data with a line chart
- Visualize distributions with boxplots
- Change the axis labels of a plot

RStudio Terminology!

The image shows the RStudio Source pane, which is the central area for editing R scripts. It is titled 'Untitled1' and contains a single line of code, '1 |'. The pane is highlighted with a thick black border. The status bar at the bottom indicates '1:1 (Top Level)' and 'R Script'.

Source pane

The image shows the RStudio Environment and Files panes. The Environment pane is titled 'Environment' and shows 'Global Environment' with a message 'Environment is empty'. The Files pane is titled 'Files' and shows a file explorer view of the 'project' directory. It lists files: '..', '.Rhistory', and 'project.Rproj'.

Install Required Packages

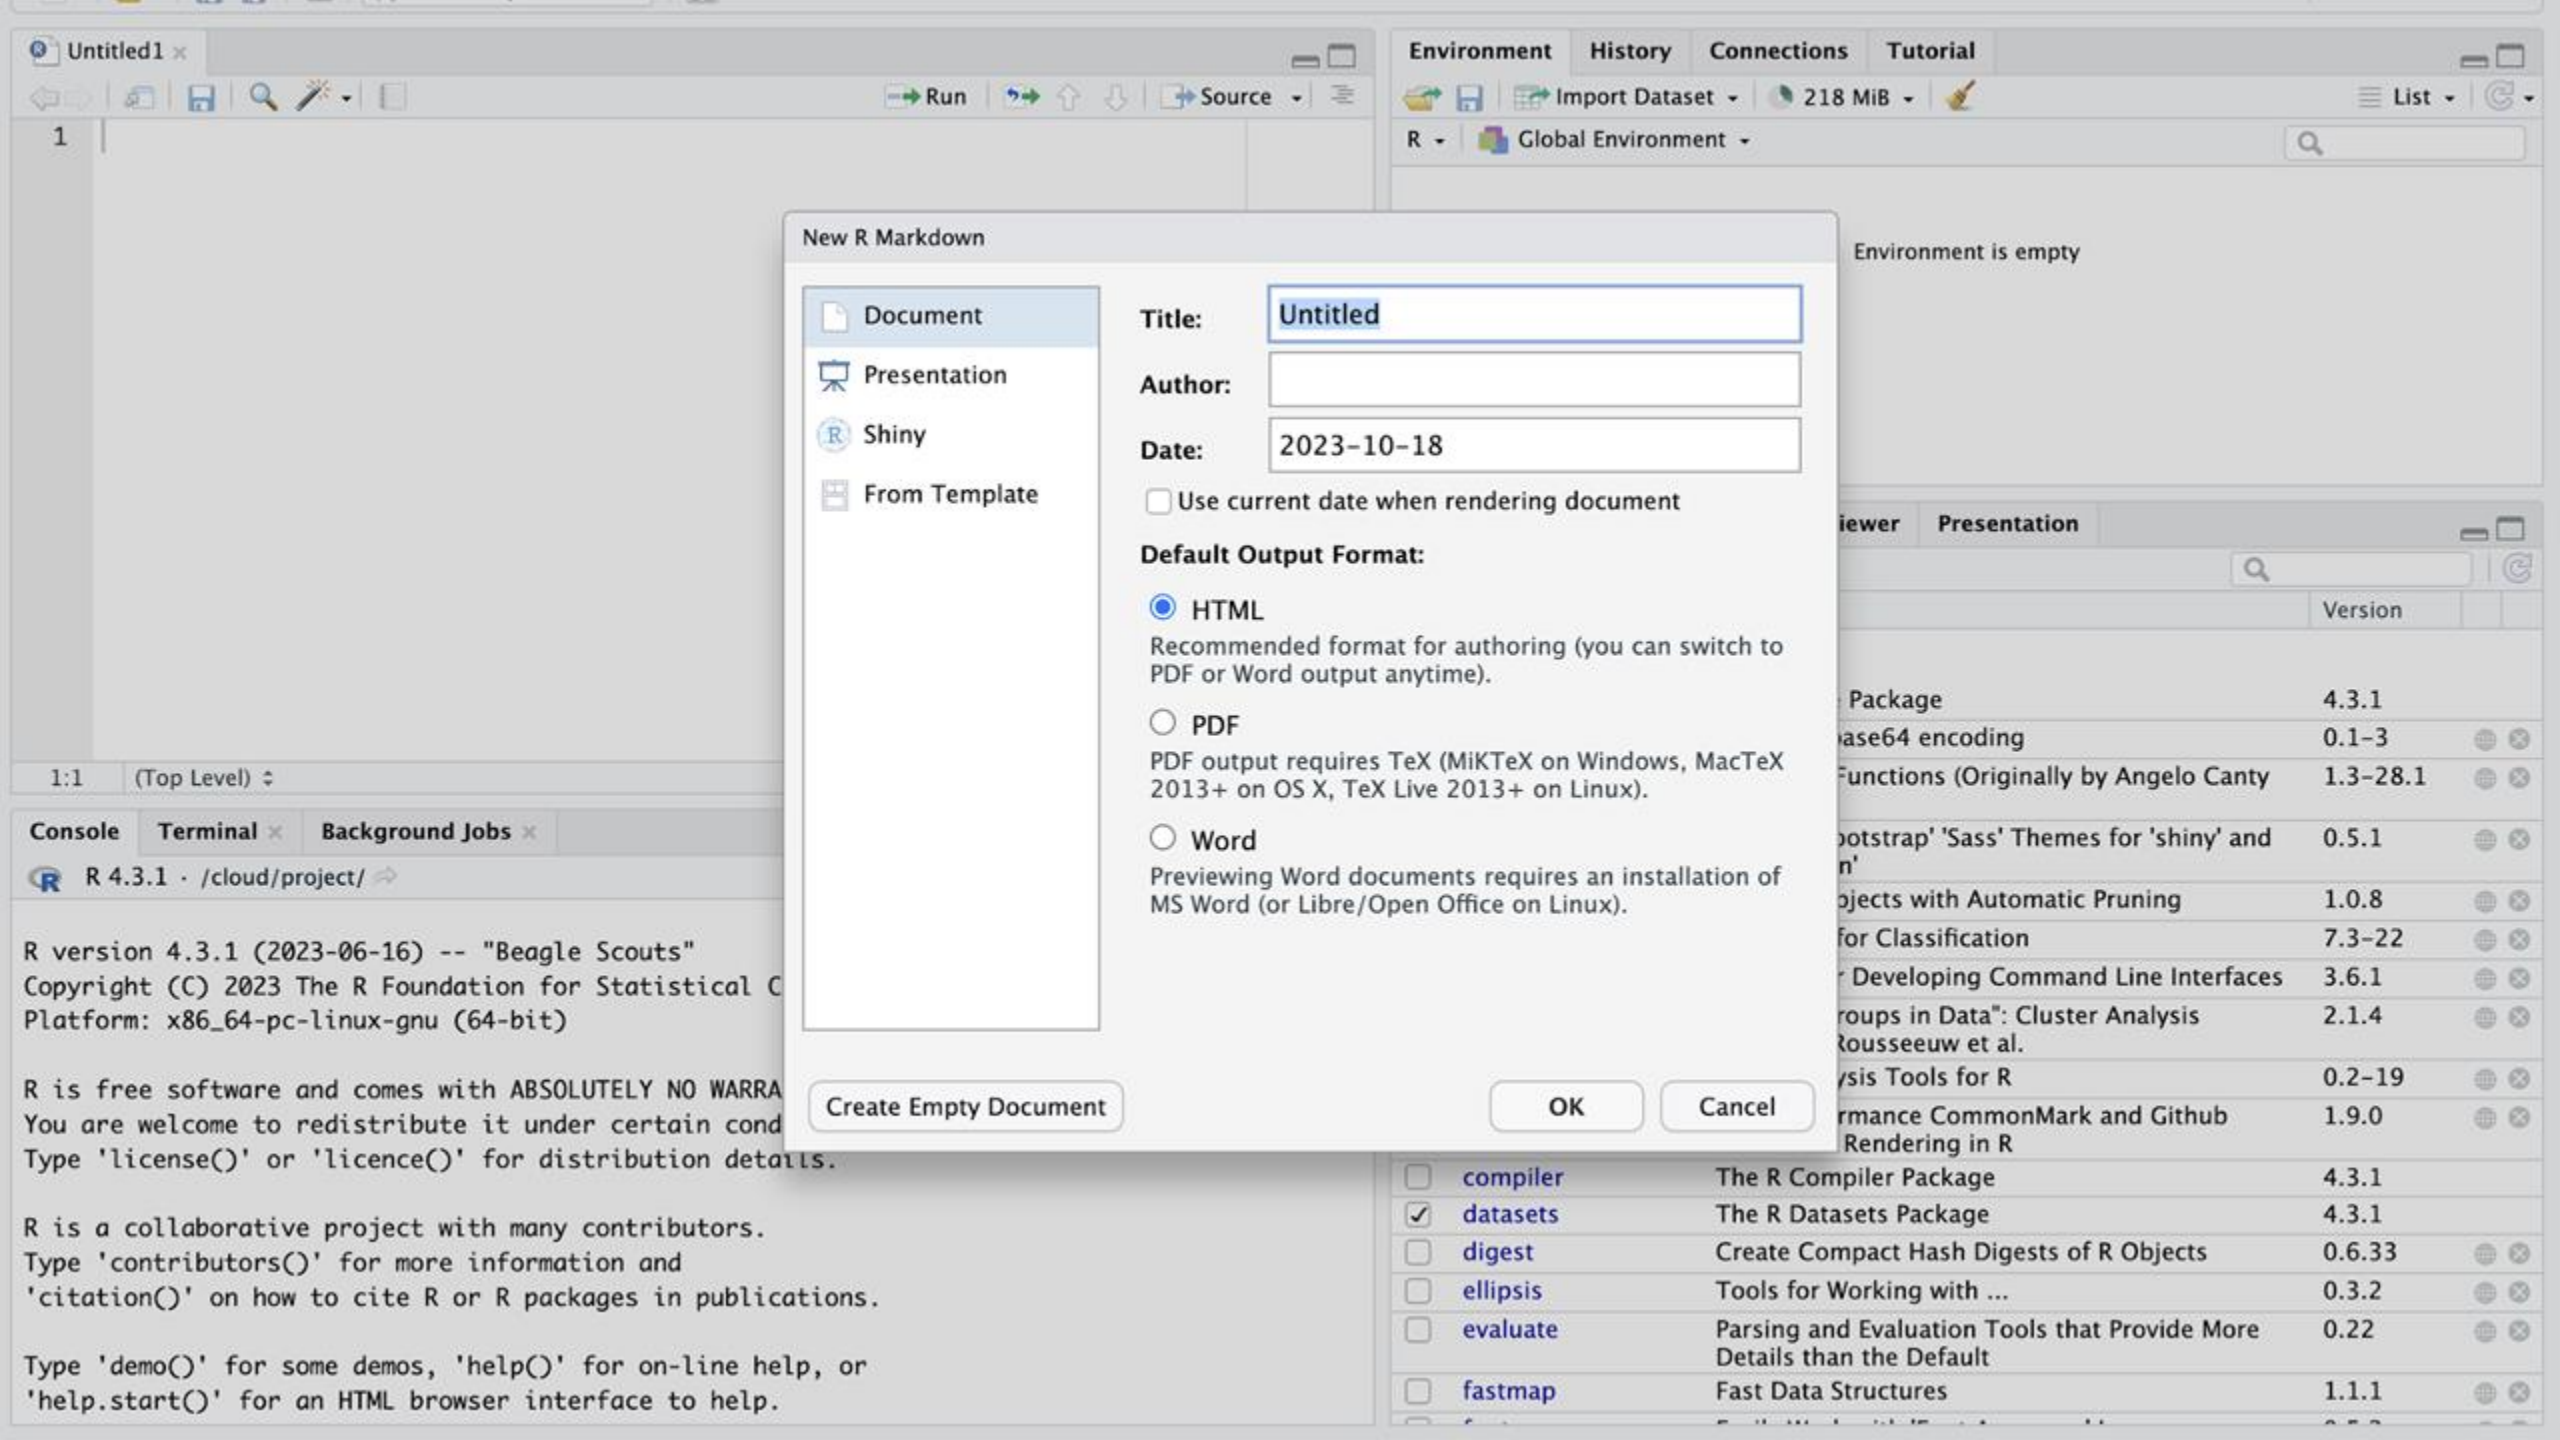

?

Creating R Markdown documents requires updated versions of the following packages: base64enc, digest, evaluate, glue, highr, htmltools, jsonlite, knitr, magrittr, markdown, mime, rmarkdown, stringi, stringr, xfun, yaml.

Do you want to install these packages now?

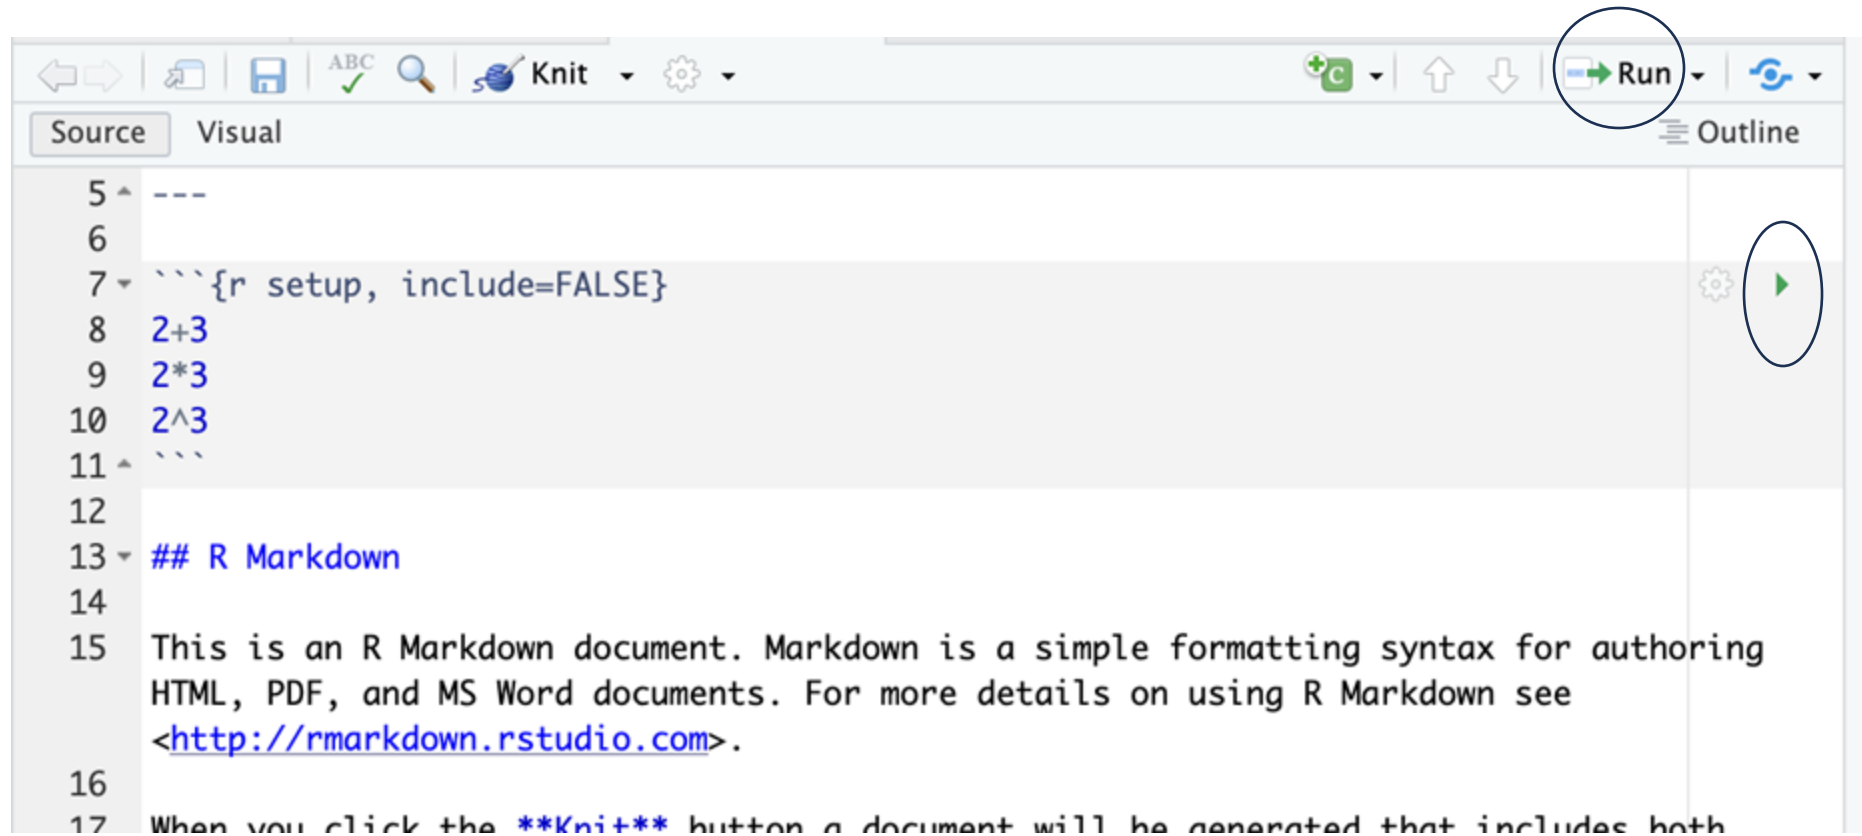

Yes

No

```
1 ---
2 title: "Intro to R"
3 output: html_document
4 date: "2023-10-18"
5 ---
6
7 ```{r setup, include=FALSE}
8 knitr::opts_chunk$set(echo = TRUE)
9 ```
10
11 ## R Markdown
12
13 This is an R Markdown document. Markdown is a simple formatting syntax for
14 creating HTML, PDF, and MS Word documents. For more details on using R Markdown
15 see http://rmarkdown.rstudio.com.
16
17 When you click the Knit button a document will be generated that contains the
18 content as well as the output of any embedded R code chunks within the document.
```

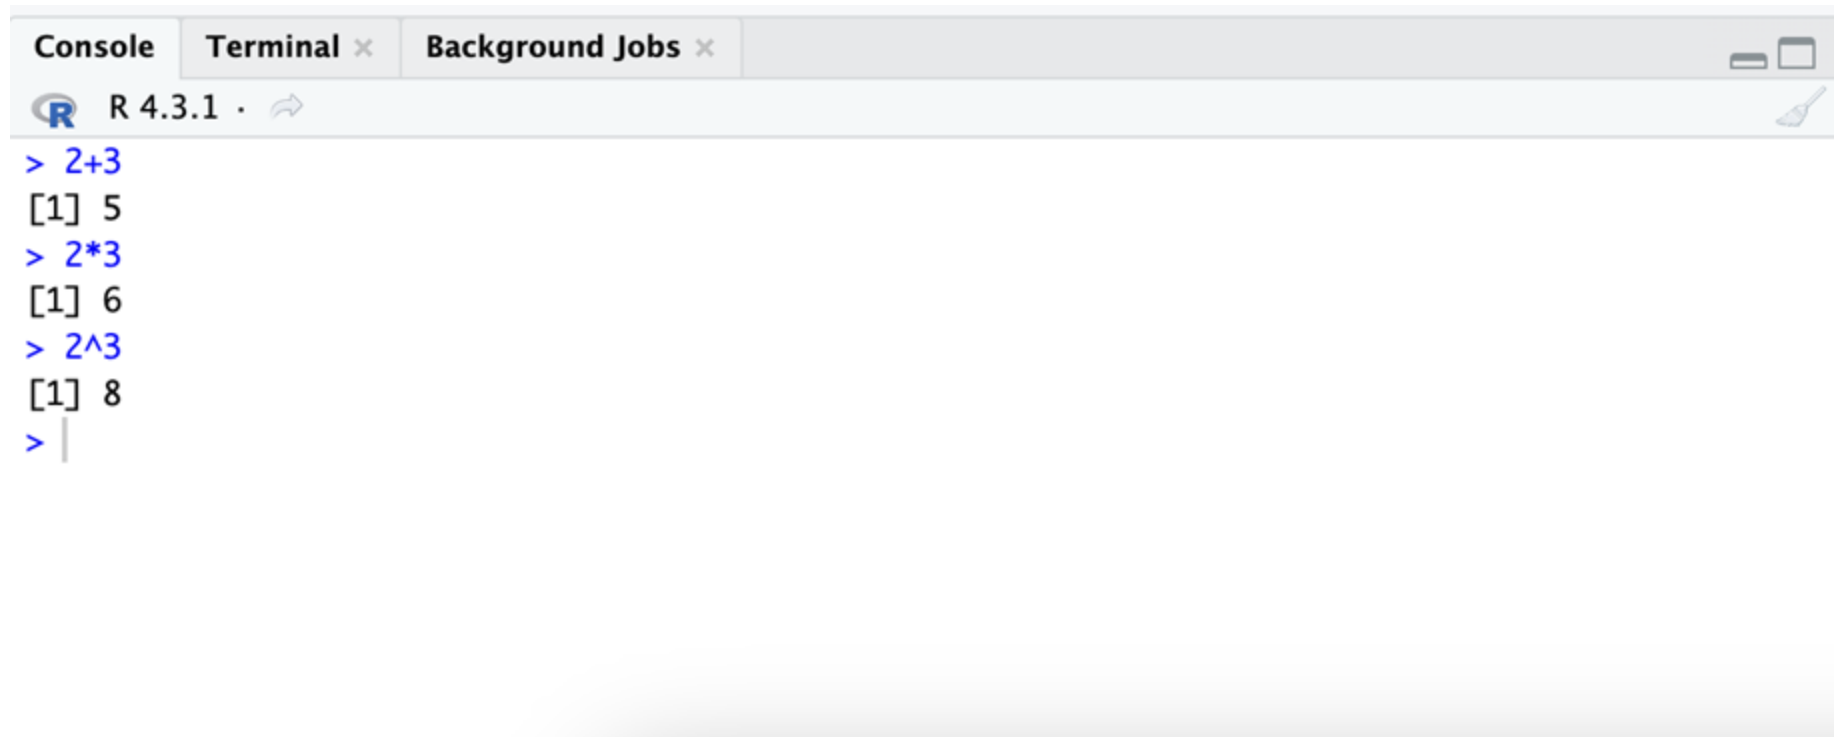

Try typing in equations:

The screenshot shows the RStudio interface with a document containing R Markdown code. The code includes a YAML header with `setup, include=FALSE`, followed by mathematical expressions $2+3$, $2*3$, and 2^3 . Below this is an R Markdown section with a title and a paragraph explaining the format, including a link to <http://rmarkdown.rstudio.com>. The 'Run' button in the top toolbar is circled in blue, and a green play button icon in the right margin is also circled in blue.

```
5 ^ ---
6
7 ^ ```{r setup, include=FALSE}
8   2+3
9   2*3
10  2^3
11 ^ ```
12
13 ^ ## R Markdown
14
15   This is an R Markdown document. Markdown is a simple formatting syntax for authoring
   HTML, PDF, and MS Word documents. For more details on using R Markdown see
   <http://rmarkdown.rstudio.com>.
16
17   When you click the **Knit** button a document will be generated that includes both
```

The results appear in the console pane.

The screenshot shows the R console interface with three tabs: 'Console', 'Terminal', and 'Background Jobs'. The 'Console' tab is active. The console title bar indicates 'R 4.3.1'. The console output shows three arithmetic operations and their results:

```
> 2+3  
[1] 5  
> 2*3  
[1] 6  
> 2^3  
[1] 8  
> |
```

Assigning variable names

```
5 ^ ---  
6  
7 ▾ ```{r setup, include=FALSE}  
8 x<-2+3  
9 y<-2*3  
10 z<-2^3  
11 ^ ```  
12
```

Assigning variable names

```
5 ^ ---  
6  
7 ▾ ```{r setup, include=FALSE}  
8 x<-2+3  
9 y<-2*3  
10 z<-2^3  
11 ^ ```  
12
```

Pulling out parts of a dataset

```
30 ▾ ```{r}
31 first_three <- x[1:3] #Pulls out the first 3 variables from the vector
32 picknchoose <- x[c(1,3,5)] #Pulls out the first, third, and fifth variable from the
   vector
33 ▴ ```
```

| | |
|-------------|-----------------|
| first_three | num [1:3] 1 3 5 |
| picknchoose | num [1:3] 1 5 9 |

```
36 ▾ ```{r}
37 data <- airquality #This line calls the airquality set and gives it the name "data"
38 head(data) #This shows a preview of the dataset
39 cor.test(data$Month,data$Temp) #This tests the correlation between the provided
   variables
40 ▴ ```
```
